DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/29/04 has been entered.

Applicant's arguments with respect to claims 1-25 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claims 1-17 and 22-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1 and 22, it is not clear what flexibility is being recited or under what conditions the flexibility is measured. For example, flexibility depends on temperature and whether the substrate is attached to another substrate.

In claims 18-21, it is not clear what is recited through use of "transparent". If applicant intends any particular degree of transmitting a particular range of wavelengths of electromagnetic radiation, it must be clearly recited.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1, 10, 17, 22, 26 and 35 are rejected under 35 U.S.C. 102(a) as being anticipated by Hiramatsu (JP-10335830).

Hiramatsu disclose producing thin film active electronics on separate carrier substrates (30A/30B); and combining said substrates using anisotropic electrical conductor (34A) (Abstract); wherein the thin film active electronics are produced continuously on separate carrier substrates; wherein the bonding layer is the conductor.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-9 and 27-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hiramatsu as applied to claims 1, 10, 17 and 22 above, and further in view of Kondo et al. (5,409,798).

Hiramatsu does not disclose that one of the substrates is one of a flexible foil, a rigid plate, a plastic, a glass and a metal.

Kondo et al. disclose that the substrate (1) may be composed of any material like, a flexible foil, rigid plate, plastic, glass or metal (Col. 4, lines 19-36); depositing a base layer and a photosensitive layer.

It would have been within the scope of one of ordinary skill in the art to combine the teachings of Hiramatsu and Kondo et al. to enable formation of the disclosed substrates and further provides a choice of different substrate materials for possible reduction in manufacturing costs.

Claims 11-16, 18-21, 23-25 and 36-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hiramatsu in combination with Kondo et al. as applied to claims 2-9 above, and further in view of Smith et al. (5,944,537).

Art Unit: 2823

The combination of Hiramatsu and Kondo et al. does not disclose forming an organic light emitting diode or transistors on the substrate

Smith et al. disclose forming an organic light emitting diode or transistors on the substrate (Col. 5, lines 23-25 and Col. 12, lines 39-41).

It would have been within the scope of one of ordinary skill in the art to combine the teachings of to combine the teachings of Hiramatsu, Kondo et al. and Smith et al. to enable formation of the electronic circuit and also provides emission devices to the structure.
